Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. You can also [explicitly grant them permissions](#). [Learn more](#)

Find objects by prefix

Show versions

☐	Name	Type	Last modified	Size
☐	 AWS Task RDP connected.png	png	November 4, 2025, 20:16:42 (UTC+05:30)	

and upload files to the bucket. We don't have access to CloudWatch to view the logs.

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. You can **Block** all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access. If you require some level of public access to your buckets or objects with applications, you can **Block** all public access. [Learn more](#)

Block all public access
 **On**

► **Individual Block Public Access settings for this bucket**

2. Launch two ec2-instances

Find Instance by attribute or tag (case-sensitive)

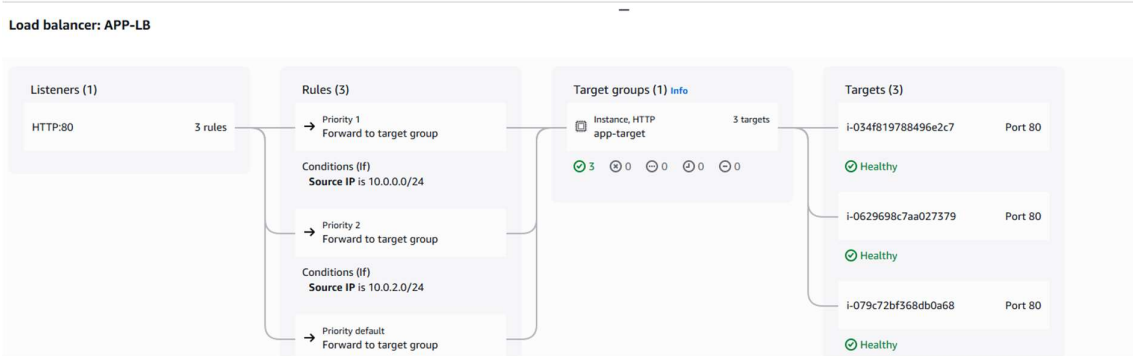

All states ▼

Instance state = running

Clear filters

☐	Name	Instance ID	Instance state	Instance type	Status check
☐	taskserver	i-079c72bf368db0a68	 Running	t3.micro	 3/3 checks passed
☐	webserver	i-0629698c7aa027379	 Running	t3.micro	 3/3 checks passed

and connect it to a application load balancer

APP-LB

Apache2 Default Page

It works!

This is the default welcome page used to test the correct operation of the Apache2 server after installation on Ubuntu systems. It is based on the equivalent page on Debian, from which the Ubuntu Apache packaging is derived. If you can read this page, it means that the Apache HTTP server installed at this site is working properly. You should **replace this file** (located at `/var/www/html/index.html`) before continuing to operate your HTTP server.

If you are a normal user of this web site and don't know what this page is about, this probably means that the site is currently unavailable due to maintenance. If the problem persists, please contact the site's administrator.

Configuration Overview

Ubuntu's Apache2 default configuration is different from the upstream default configuration, and split into several files optimized for interaction with Ubuntu tools. The configuration system is fully...
