Default output format [None]:
vicky@SriJay:~/Terraform$ terraform init
Initializing the backend...
Initializing provider plugins...
- Reusing previous version of hashicorp/aws from the dependency lock file
- Using previously-installed hashicorp/aws v6.31.0

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.
vicky@SriJay:~/Terraform$ terraform apply
Command 'terraform' not found, did you mean:
  command 'terraform' from snap terraform (1.14.3)
See 'snap info <snapname>' for additional versions.
vicky@SriJay:~/Terraform$ terraform apply
aws_instance.west_instance: Refreshing state... [id=i-027c902e7ba40743d]
```

Terraform applied successfully.

```
Do you want to perform these actions?
  Terraform will perform the actions described above.
  Only 'yes' will be accepted to approve.

Enter a value: yes
